Work Experience

Analyst, Data Management February 2026 — Present
Fresh Gravity *Remote*

- **Lifio Clinical Study Automation**: Contributed to the development and maintenance of CSAT, a clinical study automation tool, working across the full stack with MongoDB, Python/FastAPI, and AngularJS. (FastAPI, AngularJS, MongoDB)
- **CRF Generation Pipeline**: Contributed as a developer to the eCRF prediction pipeline including document digitisation, table extraction, and CRF prediction.
- **CSAT Ingestion**: Designed and developed a tool to allow ingestion of arbitrary data (CRFs, DVCs) from various sources to CSAT, with AI-enabled suggestions. (FastAPI, MongoDB)
- **SSO Integration**: Led the development and integration of SAML-based Single Sign-On (SSO), enabling secure authentication and seamless access across Lifio applications.

Software Engineer June 2023 — January 2026
LTIMindtree *Bengaluru, Mumbai, Pune*

- **Blueverse**: Contributed to the development of AIOps capabilities in the Blueverse platform, focussed on consolidation of operations data and AI-enabled insights and automations.
- **Streaming Data Pipelines**: Engineered high-performance pipelines for real-time integration of IT operations data into SQL and NoSQL databases, ensuring efficient and reliable data processing for 1000+ events per second. (Apache Spark, Kafka, Docker, Kubernetes, PostgreSQL, ArangoDB)
- **AI Agent Orchestrator**: Transformed and maintained the core orchestration layer for multi-agent communication, including handling of contextual reference, memory management and decision routing, ensuring millisecond response times for user queries. (Python (POC), Spring Boot, Websockets, SSE, Kubernetes, LLMs)
- **Data Pipeline Builder**: Created an intuitive GUI-based tool empowering data engineers and analysts to easily build and run ETL pipelines in a low-code environment. (Vue.js, Spring Boot, Apache Spark, Kafka, Kubernetes, PostgreSQL)
- **Pipeline Observability**: Architected and engineered an audit system using Apache Spark for observability in streaming pipelines, reducing downtime by over 60%. (Apache Spark, Kafka, Docker, Kubernetes, ElasticSearch)
- **Batch Data Pipelines**: Developed batch pipelines integrating service catalog data, CIs and relationships for deep analysis, reducing manual effort by 80%. (Apache Spark, Docker, Kubernetes, ArangoDB)
- **Kafka Administration**: Set up and maintained Kafka clusters on Kubernetes with SSL encryption, and optimised partitions to increase event throughput by 30%. (Apache Kafka, Strimzi, Kubernetes)

Projects

Developer, High Score Application GitHub

- Built and maintained an open-source RESTful application using the Rocket web framework and the Diesel ORM to track and manage leaderboards for any online game (Rust, Rocket.rs, Diesel.rs, SQLite)

Contributor, Snake Game GitHub

- Handled the migration of a Flask/SQLAlchemy/pip application to FastAPI/SQLModel/uv, improving DX and lowering request latency (Python, FastAPI, uv)

Education

Maharashtra Institute of Technology Pune, IN
Bachelor of Technology, Electronics and Computer Engineering *May 2019 — May 2023*

- Capstone Project: Intelligent Traffic Light Control System - AI object-detection-based adaptive signal timing system.
- Relevant Coursework: Data Structures & Algorithms, Data Science and Analytics, DBMS, ML, Computer Networks, Embedded Systems.

Achievements and Awards

- **Best Techie** - Automation Batch 11, LTIMindtree
- **Best Research Paper** - 5th National Conference on Innovative Global Technology Trends, MIT ADT University

Skills

- **Languages**: Java, Python, Rust, JavaScript, HTML/CSS
- **Technologies**: Apache Spark, Spring Boot, FastAPI, Vue.js, LangChain, Angular.js, Apache Kafka, Docker, Kubernetes, Websockets, SSE, Git, CI/CD, Rocket.rs, Diesel.rs
- **Databases**: PostgreSQL, MySQL, SQLite, ArangoDB, MongoDB, ElasticSearch, ChromaDB
